CYBERSECURITY + ESSENTIALS

- **24X7X365 U.S. BASED REMOTE END-USER**

Simplify end-user support, expand coverage, and eliminate management costs.

- **ENDPOINT SECURITY**

Protect your systems and devices from malicious activities and cybersecurity threats by ensuring a secure network.

- **SOPHISTICATED EMAIL SECURITY**

Simplify end-user support, expand coverage, and eliminate management costs.

- **ANTI-VIRUS WITH MACHINE LEARNING**

Contact center services offer support on multiple platforms, including incoming calls, web, and social for maximum client engagement.

- **ANTI-MALWARE**

Take your regular webchat to the next level for enhanced productivity with voice, video, and screen-share capabilities.

- **ANTI-SPAM**

Navigate the web collaboratively with your customers in order to improve sales and services.

- **ROOT CAUSE ANALYSIS**

Implement the most effective approach for the future by identifying the hidden causes behind an incident.

- **BLACKLIST/ALLOWLIST MANAGEMENT**

Steer clear of non-productive, damaging, and malicious content by managing the block/allow list.

- **SCRIPT CONTROL & ANTI-EXPLOIT + BEHAVIORAL DETECTION**

Enjoy extensive user programming capabilities alongside an additional layer of security to block potential web attacks.

- **AUTOMATED RESPONSE**

Protect your environment by automating the quarantine process for all your machines. Protect all your end-points effectively in case of a malicious discovery on a single end-point.

- **URL PROTECTION**

Targeted attacks on a system are prevented using email security technology for URL protection.

- **ATTACHMENT PROTECTION**

Provides an advanced service of multiple layer protection to eliminate the risk of phishing.

- **EMAIL ARCHIVING**

Organize and maintain the organizational data while speeding up the restoring process.

- **SECURE EMAIL GATEWAY**

Offering a system that lets only the secure emails reach the server and blocks suspicious ones after careful inspection to avoid all security threats.

- **DLP & CONTENT CONTROL**

Protect sensitive data from unauthorized access or leak by full email scanning, encoding, managing dictionaries, and fingerprinting documents.

CYBERSECURITY+ ADD ONS

- **ALL ESSENTIALS**

Get a closer look at your business strengths and weaknesses through complete insight with call recording.

- **NEXT-GENERATION FIREWALL**

Quick issue resolution by reducing wait time can help the businesses achieve new levels of success and efficient customer service.

- **INCIDENT TRIAGE**

Detection of threats and incident response assistance by instantly analyzing and blocking malicious activity.

- **SECURITY INCIDENT EVENT MONITORING**

Offering advanced threat monitoring & correlation of near-real-time analysis of security events with detection and prevention against unwanted installations.

CYBERSECURITY+ PREMIUM

- **ALL ESSENTIALS & ADVANTAGES**

Offering all the basic and advanced security services to protect small and large businesses online so they can focus on growth and productivity.

- **MULTI-FACTOR AUTHENTICATION**

Neutralize the risk of compromising passwords and losing sensitive data by adding two or more verification factors for access.

- **EMPLOYEE CYBERSECURITY AWARENESS TRAINING**

Steer clear of sophisticated and tricky tactics through mock phishing campaigns and vulnerable user assessments to protect the organization from any breach.

- **SINGLE-SIGN ON**

Authentication method that offers access to the data on multiple devices or applications using a single set of credentials.

- **ASSET DISCOVERY & TRACKING**

Keeps account of all your assets on a network by discovering and gathering data for quick access at any time.

- **CONTINUOUS VULNERABILITY & THREAT SCAN**

A system that points out any security flaws in the network and begins to stop and reverse the damage by identifying and analyzing vulnerabilities.

DON'T WORRY WE'VE GOT YOUR BACK 24x7x365

- Round the clock SOC/NOC monitoring and troubleshooting with eyes on glass device.

- Controlled information flow with firewall policy creation, tuning, and optimization.

- Combination of a traditional firewall with other network security functions to offer NGFW.

- Offering full security alongside intrusion detection and prevention by closely monitoring and analyzing the system.

- Anti-virus and anti-malware for an added layer of security to ensure a strong barrier against cyber threats.

- Offering URL filtering for protection against unwanted links and selected browsing.

- Application Visibility to minimize application-level threats by providing control over the network.

- SSL decryption provides an insight into the secure HTTP traffic to ensure the safety of the system.

- Management of Site-to-Site and Remote Access VPN connect remote offices together.

- Manufacturer warranty for hardware replacement management and return merchandise authorization.
